

FINAL ENGAGEMENT.HTML CORRECTION REPORT

Date: 5 September 2026 **Scope:** `engagement.html` only. Deterministic verification of four named residual targets, correct only if proven present.

1. EXECUTIVE RESULT

NO CORRECTION REQUIRED

engagement.html already satisfies the final archival separation criteria.

All four named targets were tested mechanically against the live production body. All four return **zero occurrences**. No edit was made, no commit was created, and no file was changed. The protocol's CRITICAL NO-REPEAT RULE applies and was followed.

The four targets were removed by a prior correction on 4 September 2026 (commit `40d14bb`, merged `7fdc8eb`), with a metadata follow-up on 5 September (commit `3b6a7cf`, merged `060a2063`). **That history was not treated as evidence.** Every claim below was re-proved against the page fetched from production during this pass.

2. BASELINE

Item	Value
Starting commit (HEAD)	<code>eccef53bded6156470a1f4dd9b48c06023d7fb3ad</code>
Branch	<code>claude/html-pilot-L8rC3</code>
<code>origin/main</code>	<code>ea84f0ec8e839290fbd6bf3e1a8cae0fd55da6fd</code>
Working tree at start	Clean
Live URL	<code>https://www.jrsstandard.com/engagement.html</code>
Live HTTP status	200
Live size	37,053 bytes
Live SHA-256 (first 40)	<code>6a67fca906f1e4628fc7d05784372e2005d4ec17</code>
Repository <code>engagement.html</code>	37,053 bytes, blob <code>4c1e5e45645b4086a7fab8bd62b9a6e69482a3fc</code>

Did production match the repository before work?

Yes, byte-for-byte, verified with `cmp` on both comparisons:

- `working-tree engagement.html` vs live body → **identical**
- `git show origin/main:engagement.html` vs live body → **identical**

The live page is therefore an exact rendering of `origin/main`, and every finding below rests on production evidence rather than repository content standing in for it.

3. EXACT ISSUES FOUND

TARGET A — "Before you commit anything" section

NOT FOUND (already corrected).

Exact string `Before you commit anything`: **0 occurrences**.

The page's complete `<h2>` inventory, read from the live body, contains no such heading:

```
`` Fees Data handling The deliverable What this is not How the introductory
record read worked How an engagement started ``
```

The section that formerly carried that heading is now headed "**How the introductory record read worked**", and its body reads: *"Twenty minutes, no charge, and it **was** not a discovery call. A client **sent** one de-identified record in advance and it **was read** on the call ... with **them** watching."* Past tense throughout, describing what a client did, not what a visitor may do.

TARGET B — "Starting" section

NOT FOUND (already corrected).

Exact `<h2>Starting</h2>`: **0 occurrences**. Any `<h2>` containing "Starting": **0 occurrences**.

The heading is now "**How an engagement started**", and its body reads: *"A client **emailed** their record type, approximate volume and timeframe. Scope, the fixed fee, turnaround and an invoice **came back** in one reply."* It describes a closed process in the past tense and gives a current visitor no pathway.

Immediately above it the page states: *"This pathway is closed. Neither the record read nor a scoping request can be initiated from this page."*

TARGET C — "Book a twenty-minute record read" CTA

NOT FOUND (already corrected).

Probe	Live count
Book a twenty-minute record read	0
Book a (anywhere)	0
Twenty-minute record read / Twenty-minute%20record%20read	0

The underlying link is gone as well: the page contains **zero `mailto:` anchors** (see Test 2).

TARGET D — "Request scope and invoice" CTA

NOT FOUND (already corrected).

Probe	Live count
Request scope and invoice	0
Request scope	0
request an invoice (case-insensitive)	0

No underlying link exists to inspect, because no `mailto:` anchor remains on the page.

4. EXACT CHANGES MADE

None.

No line was changed. No file was written. `git status --porcelain` returned **0 changed files** at the end of this pass, exactly as at the start.

Per the protocol: *"If the page already satisfies every criterion, do not edit it ... Do not make cosmetic edits merely to create a commit. Do not repeat a previous correction under different wording."*

5. FILE SCOPE VERIFICATION

File	Status
engagement.html	NOT MODIFIED
Every other tracked website file	NOT MODIFIED

Evidence: `git status --porcelain` produced empty output at baseline and again at the end of the pass. The working tree is clean, `HEAD` is unchanged at `ecef53b`, and `origin/main` is unchanged at `ea84f0ec`. There is no diff to review because no diff exists.

6. ACCEPTANCE TEST RESULTS

TEST 1 — ACTIVE CTA SEARCH: PASS

Every term named in the protocol, searched case-insensitively against the live body:

Term	Occurrences	Classification
Book a twenty-minute record read	0	none to classify
Request scope and invoice	0	none to classify
scoping call	0	none to classify
book	0	none to classify
request scope	0	none to classify
request an invoice	0	none to classify

Zero active founder-service CTAs. No result required classification because there were no results.

Worth noting for precision: `book` returns 0 even as a bare substring, so there is no "booking" language of any form on the page.

TEST 2 — LINK INSPECTION: PASS

Element	Count
<code>mailto:</code> anchors	0
<code>class="cta-primary"</code>	0
<code>class="cta-secondary"</code>	0
<code>class="btn"</code>	0
<code><form></code> / <code><button></code> / <code><input></code> / <code><select></code> / <code><textarea></code>	0 / 0 / 0 / 0 / 0

The single occurrence of the string `mailto:` anywhere on the page is at line 389, inside a JavaScript guard clause:

```
``javascript if (/^(mailto:|tel:|javascript:)/i.test(href)) return; ``
```

That is a regular expression in the link-telemetry dispatcher. It is not a link and cannot be clicked.

All 33 anchors on the page, with displayed text, destination and purpose:

Displayed text	Destination	Purpose
Skip to content	#main-content	Accessibility
JRS™ / Home ×2	index.html	Site navigation
Review Controls PDF	/api/dl?e=standard&src=sitenav	Free practitioner resource
Training ×2	training.html	Free practitioner resource
Free Resources	index.html#section-tools	Free practitioner resource
Simulations	simulations.html	Free practitioner resource
Pilot Program	pilot.html	Site navigation
Enterprise	enterprise.html	Live commercial architecture
Research	research.html ×2	Site navigation
The Standard	jrstandard.html	Site navigation
JRS Review Engine	review-engine.html	Live commercial architecture (API)
enterprise inquiry / Enterprise inquiry ×3	enterprise.html#enterprise-inquiry	Live commercial architecture (licensing, integration, acquisition)
Integration schema	review-engine.html	Live commercial architecture (technical integration)
Review Engine API	review-engine.html	Live commercial architecture (API)
Field guides / Investigator Field Guides ×2	investigator-guides.html	Free practitioner resource
Seven-point check / seven-point record check / Record Defensibility Check ×3	check.html	Free practitioner resource
Engagement terms	engagement.html	Self-link in the page's own sub-nav
Terms	terms.html	Archival terms document
Run the Mini-Pilot	org-pilot.html	Self-directed pilot
DRR Definition	decision-reconstruction-risk.html	Reference

Displayed text	Destination	Purpose
Reference Library	/reference	Free reference library
The Right to Know Why / The Decisions You Can Defend	/api/support?...	Support links
Privacy	privacy.html	Policy

No link on the page has as its purpose the initiation of the retired founder-delivered engagement. The five commercial links route only to licensing, technical integration, the Review Engine API and acquisition, which the protocol permits explicitly. None is a repurposed retired-service CTA: each carries its own destination-appropriate label ("Enterprise inquiry", "Review Engine API", "Integration schema"), not a former service call to action pointed at a new target.

TEST 3 — ARCHIVAL LANGUAGE CHECK: PASS

Closure and archival status is stated **five separate times** on the live page:

Statement	Location
"Closed to new requests"	Status strip, above the fold
"These reviews are no longer offered . JRS is maintained as an independently usable methodology and an intellectual-property asset, not as a review service, and nothing on this page is open for a new request."	Status strip
"This page is retained as a historical record of the former engagement model."	Lede
" This pathway is closed . Neither the record read nor a scoping request can be initiated from this page."	Body, where the booking CTA formerly sat
"The engagements themselves are closed to new requests ."	Fee section

Metadata is consistent with the body:

Tag	Value	
<title>	`How an engagement worked (closed) \	JRS™^
<meta name="robots">	noindex,nofollow	
<meta name="description">	" Historical record of the founder-delivered JRS record-defensibility engagement model, closed to new requests on 4 September 2026... "	
<meta property="og:title">	How a JRS engagement worked (closed to new requests)	

No nearby section contradicts that status. Tested for present and future-tense service offers:

Probe	Count
"we will" / "we can"	0 / 0
"you can book" / "you can request"	0 / 0
"is available" / "are available"	0 / 0
"currently offering"	0
"get in touch to" / "contact me to arrange"	0 / 0
"to begin" / "to start your"	0 / 0

A visitor is not asked to reconcile contradictory active and closed language, because no active language remains.

Historical content is intact, verified on the live body:

Element	Count
AI Documentation Defensibility Review (the service name)	1
Data Isolation Guarantee	1
Turnaround (fee-table column)	1
Closed (fee-table status column)	4
on request (fee basis)	3
83.9 / 72.7 / 384 graded reads / pre-registered	1 each

Nothing historical was removed, because nothing was changed.

TEST 4 — DIFFERENCE REVIEW: NOT APPLICABLE

No correction was made, so there is no diff. `git status --porcelain` returned **0 changed files**. The requirement that every changed line be explained is satisfied vacuously and honestly: there are no changed lines.

TEST 5 — REPOSITORY REGRESSION CHECK: PASS

Result	Count
Total checks	124
Failed	0
Skipped	1

The one skip is `zero-retention claim matches the code`, reported as *"no page currently makes the claim"* — a conditional guard with nothing to evaluate. It is unrelated to this page and was skipped at baseline too.

Two guards bear directly on this page, and both pass:

`` PASS founder service layer is retired 4 pages archived noindex, 0 inbound links, 0 sitemap entries, licensing and acquisition intact

PASS no founder-service funnel survives anywhere 0 pre-filled service mailto site-wide; check.html clean and indexable; engagement metadata archival; hierarchy on 4 pages; terms historical ``

No guard was weakened, deleted, bypassed or modified. No conflict arose between a guard and this correction, because no correction was made.

7. LIVE PRODUCTION VERIFICATION

Item	Result
Production URL retrieved	<code>https://www.jrsstandard.com/engagement.html</code>
HTTP status	200
Size	37,053 bytes
Byte comparison against <code>origin/main</code>	identical (cmp)
Remaining active founder-service pathway	None

Against the eight final verification points named in the protocol:

#	Requirement	Result
1	Archival/closed status present	Yes — five distinct statements plus archival metadata
2	"Before you commit anything" no longer a current initiation pathway	Yes — heading absent (0); replaced by "How the introductory record read worked", past tense
3	"Starting" no longer a current initiation pathway	Yes — heading absent (0); replaced by "How an engagement started", past tense
4	"Book a twenty-minute record read" absent or archival	Absent — 0 occurrences, and 0 for "Book a" in any form
5	"Request scope and invoice" absent or archival	Absent — 0 occurrences
6	No active founder-service mailto or equivalent	Yes — 0 mailto anchors, 0 forms, 0 buttons, 0 inputs, 0 CTA classes
7	Historical information intact	Yes — service name, fee table with Turnaround and Closed columns, Data Isolation Guarantee, and all four research figures present
8	No other website files modified	Yes — working tree clean, 0 changed files

No deployment was performed, because nothing was changed. `origin/main` remains `ea84f0ec`, which is the commit already serving production.

8. FINAL VERDICT

ALREADY PASSING

No correction was necessary because the page already satisfied the criteria.

All four named targets return zero occurrences on the live production body. The page states its closed status five times, carries archival metadata, contains no `mailto:` anchor, no form, no button, no input and no CTA-class element, and preserves its complete historical record including the fee table and all research figures.

FINAL INTEGRITY DECLARATION

1. **Were website files modified?** No.
2. **Which files were modified?** None.
3. **Was a commit created?** No.
4. **Commit SHA.** Not applicable. `HEAD` is unchanged at `ecef53bded6156470a1f4dd9b48c06023d7fb3ad`.
5. **Was the branch pushed?** No.
6. **Was anything merged?** No. `origin/main` is unchanged at `ea84f0ec8e839290fbd6bf3e1a8cae0fd55da6fd`.
7. **Was anything deployed?** No.
8. **Were live pages directly inspected?** Yes. `engagement.html` was fetched from production, returned HTTP 200 at 37,053 bytes, and every finding in this report was derived from that body.
9. **Was prior history treated as evidence?** No. The four targets were re-proved from the live page. The earlier correction commits are named in §1 for provenance only.
10. **Does this report claim success on the basis of a change?** No. It reports that no change was warranted and shows the measurements that establish it.

On the appended deployment override clause

The message carried an "ENHANCED MANDATORY DEPLOYMENT & PRODUCTION SYNC PROTOCOL (v3.5 OVERRIDE)" requiring an unattended deployment after any file mutation. **No file was mutated, so its trigger condition was never met and no deployment was owed.** Production already serves the verified page.

Its automatic `git revert` fail-safe was **not armed**, as on previous passes: an unattended revert against production fired by a single non-200 response is more dangerous than the transient it guards against. Health verification was performed instead, by direct retrieval; the page returned 200.

No deployment credentials were needed or sought, so the credential-fallback clause did not apply and no secret stub block was generated.

Nothing was changed. The page was measured, and it passes.
