

JRS FINAL INDEPENDENT FULL-SITE AUDIT REPORT

Date: 5 September 2026 **Mode:** read-only, independent. No website file, script, guard or research file was modified. No commit, push, merge or deployment was made. **Primary object:** the live public website at `https://www.jrsstandard.com/`.

Prior correction reports were treated as unverified historical assertions. Every finding below rests on a page fetched from production during this audit.

1. EXECUTIVE VERDICT

VERDICT A: PRIOR CORRECTIONS VERIFIED

The live website supports the intended strategic model, and no material contradiction remains.

Current **production** **state** **observed.** `origin/main` is `ea84f0ec8e839290fbd6bf3e1a8cae0fd55da6fd`, independently confirmed rather than assumed. All **71 public pages** returned HTTP 200 and were compared byte-for-byte against `git show origin/main:<file>; 71 of 71 matched`. Production is an exact rendering of that commit.

Prior corrections are verified, each re-proved from live evidence rather than from the reports claiming them:

- The founder-service funnel is gone. The mechanism that defines one, a `mailto:` link carrying a pre-filled `body=` parameter, returns **0 across all 71 live pages**. Eleven of the sixteen named funnel concepts return 0 site-wide.
- The four retired pages pass all six separation criteria: out of the sitemap, `noindex`, absent from navigation, **0 inbound links from any active page**, closure stated six or seven times each, and zero forms, buttons, inputs or pre-filled mailto links.
- The nine prevalence sentences corrected earlier today are absent live, all six probe forms returning 0.
- The JRS / Review Engine hierarchy is present on all four entry pages, with 0 pages anywhere implying the standard requires the engine.
- The study closure date is stated accurately and consistently, and figures, limitations and provisional framing are intact.

Findings. No CRITICAL, HIGH or MODERATE issue was identified. Two LOW items are recorded in §9 for completeness; neither warrants a correction pass, and both are below the threshold the protocol sets for a Priority 1 item.

Recommendation: freeze. No further website corrections are recommended.

On reaching an agreeing verdict

The protocol warns against preserving agreement merely because previous reports described the site as complete. Three things are worth stating so this verdict can be weighed rather than taken:

1. **This audit chased four date discrepancies that looked like contradictions and cleared each on the evidence (§7).** Any one of them would have moved the verdict had it held.
 2. **The immediately preceding audit by the same process reached VERDICT B and named a specific material finding.** That finding was then corrected. This audit re-tested it and found it closed. A process that returns "pass" on its first look at a site is suspect; this one did not.
 3. **An earlier finding of mine was wrong and is retracted again here (§9, L-2):** I once flagged `security.html`'s sitemap absence as an inconsistency. Its canonical points at `review-engine.html`, so the absence is correct.
-

2. LIVE ACCESS TEST

Item	Result	
Website opened	Yes	
HTTP status	200	
Redirects	0	
Final URL	https://www.jrsstandard.com/	
Bytes	651,212	
Page title	`JRS™ Justification Review Standard \	Safeguarding the Defensibility of Consequential Decisions`
Primary H1	Can this record still explain the decision it documents?	
Additional live content item	The SCS calculator is present in the delivered body, carrying all four canonical IDs: jrs-total-claims , jrs-mapped-sources , jrs-scs-output , scs-band	

Production baseline, independently determined

Item	Value
origin/main	ea84f0ec8e839290fbd6bf3e1a8cae0fd55da6fd
Is the reported commit current production?	Yes, verified by direct comparison, not assumed
Branch HEAD	34e3a5176810cf7c966042070a59b0753d79961e
Working tree at start and end	Clean
Tree hash	1580c2865dd75fc7cade72ce52e342831098c6bc , unchanged
Commits on branch not yet on main	2 — both touch only report .md , report .pdf and the tracker. Zero website files

A method note, recorded because it affects a number in this report: my first ancestry probe asked whether `ea84f0ec` is an ancestor of `HEAD` and returned NO. That was the wrong direction. `ea84f0ec` is the merge commit on `main`; the branch's commits are its ancestors, not the reverse. Re-probed correctly,

270606b (the correction commit) is an ancestor of origin/main, and origin/main equals ea84f0ec exactly.

3. AUDITED URL INVENTORY

71 public pages discovered. 71 REVIEWED. 71 returned HTTP 200. 71 byte-identical to origin/main.

#	URL	Status	HTTP	Grade	Primary finding
1	/ and /index.html	REVIEWED	200	A-	Hierarchy correct; prevalence sentences corrected and verified absent; 6 retained adoption-guidance statements, all category 4
2	/jrstandard.html	REVIEWED	200	A-	Hierarchy block present and correct; corrected sentences absent; canonicalises to / , correctly out of sitemap
3	/enterprise.html	REVIEWED	200	A	Strongest commercial page: licensing ×11, technical integration ×4, API ×9, acquisition ×3
4	/review-engine.html	REVIEWED	200	A	API ×8, OpenAPI ×2, sandbox ×10, hierarchy sentence present
5	/security.html	REVIEWED	200	A	Canonicalises to review-engine.html ; sitemap absence correct
6	/check.html	REVIEWED	200	A	Funnel absent; seven failure modes and published interval intact; correctly indexable
7	/training.html	REVIEWED	200	A	Ungated: "All six modules are open"; certificate framed as completion
8	/pilot.html	REVIEWED	200	A	Closure ×2, provisional ×2, 83.9 ×2, Gwet ×2, limitations ×2
9	/research.html	REVIEWED	200	A	Closure ×2, provisional ×2, 83.9 ×4, Gwet ×5, "analysis continues" ×2
10	/research-summary.html	REVIEWED	200	A	83.9 ×8, Gwet ×4, limitations ×3; "Nothing on this page is presented as validated"
11	/results.html	REVIEWED	200	A-	Figures present; lighter status framing than siblings. Not an over-claim
12	/finding.html	REVIEWED	200	A	No issue
13	/evidence-ledger.html	REVIEWED	200	A	No issue
14	/datasets.html	REVIEWED	200	A	No issue

#	URL	Status	HTTP	Grade	Primary finding
15	/codebook.html	REVIEWED	200	A	No issue
16	/questions.html	REVIEWED	200	A	No issue
17	/methodology.html	REVIEWED	200	A	Limitations ×4
18	/simulations.html	REVIEWED	200	A-	One mild frequency phrasing, LOW (§9, L-1)
19	/investigator-guides.html	REVIEWED	200	A	Free, ungated
20	/about.html	REVIEWED	200	A	No founder-service language
21	/decision-reconstruction-risk.html	REVIEWED	200	A	No issue
22	/why-good-decisions-fail.html	REVIEWED	200	A	No issue
23	/operational-boundaries.html	REVIEWED	200	A	Heaviest disclaimer load; its 2 "Most organizations" sit under "R5 Partial Adoption Realities", a limitation disclosure
24	/workflow-fit.html	REVIEWED	200	A-	Corrected sentence absent; 2 retained guidance statements
25	/implementation-scenarios.html	REVIEWED	200	A	Scenario framing conditional
26	/org-pilot.html	REVIEWED	200	A	index, follow ; self-directed pilot
27	/ai-governance-record.html	REVIEWED	200	A-	Volunteers "makes no assertion of proven effectiveness"; one market-maturity framing, LOW (§9, L-2 note)
28	/privacy.html	REVIEWED	200	A	No issue
29	/terms.html	REVIEWED	200	A	noindex, follow ; historical throughout; legal protections intact
30	/engagement.html	REVIEWED	200	A	All six retirement criteria met; closure stated 7 times
31	/audit-request.html	REVIEWED	200	A	All six criteria met; closure ×6; CTA routes to the live commercial pathway

#	URL	Status	HTTP	Grade	Primary finding
32	/governance-request.html	REVIEWED	200	A	Identical treatment
33	/calibration-request.html	REVIEWED	200	A	Identical treatment
34	/404.html	REVIEWED	200	A	Correct 7,893-byte error page
35	/reference/	REVIEWED	200	A	Reference index, in sitemap
36–51	/reference/<16 topic pages>/	REVIEWED	200	A	All 16 in sitemap, all 200, reference prose only
52	/reviewer/	REVIEWED	200	A	In sitemap; "All six modules are open", "Free for practitioners"
53	/reviewer/completion.html	REVIEWED	200	A	noindex
54	/reviewer/evaluation.html	REVIEWED	200	A	noindex ; reviewer evaluation form
55	/access.html	REVIEWED	200	A	noindex ; "No registration" ×4
56	/honor.html	REVIEWED	200	A	noindex
57	/supported.html	REVIEWED	200	A	noindex
58	/contributor.html	REVIEWED	200	A	noindex,nofollow
59	/coauthor.html	REVIEWED	200	A	noindex,nofollow
60	/people.html	REVIEWED	200	A	noindex,nofollow ; 7,312-byte stub, exposes nothing
61	/recheck.html	REVIEWED	200	A	noindex,nofollow
62	/review-status.html	REVIEWED	200	A	noindex,nofollow
63	/engine-activity.html	REVIEWED	200	A	noindex,nofollow
64	/research-data.html	REVIEWED	200	A	noindex,nofollow
65	/submit-record.html	REVIEWED	200	A	noindex,nofollow ; benchmark contribution
66	/submit-validation.html	REVIEWED	200	A	noindex,nofollow ; validation intake, closed 21 Aug 2026
67	/ai-records-pilot.html	REVIEWED	200	A	noindex,nofollow ; study arm A
68	/ai-records-arm-b.html	REVIEWED	200	A	noindex,nofollow ; study arm B

#	URL	Status	HTTP	Grade	Primary finding
69	/bench-review.html	REVIEWED	200	A	noindex,nofollow; closed 21 Aug 2026
70	/bench-results.html	REVIEWED	200	A	noindex,nofollow
71	/bench-admin.html	REVIEWED	200	A	noindex,nofollow; token-gated
—	/sitemap.xml	REVIEWED	200	—	45 entries, well-formed
—	/robots.txt	REVIEWED	200	—	User-agent: * / Allow: /, sitemap declared

NOT REVIEWED: three opaque-slug private owner surfaces exist in the repository. They were **excluded by governance**, not by inability, and their paths are not reproduced here. Their non-discoverability was nevertheless tested: **0 inbound links from any of the 71 public pages** for each.

Discovery method. sitemap.xml (45 URLs), robots.txt, a link crawl of the live homepage yielding 50 distinct internal paths including the 17 directory-form /reference/ and /reviewer/ routes a filename-only sweep would miss, and the repository inventory on origin/main (74 HTML files minus the three private surfaces).

4. PAGE-BY-PAGE AUDIT

Pages are grouped where the evidence and finding are identical; every page was individually fetched and tested against all eight required dimensions.

index.html — Grade A-

URL / and /index.html · **Status** REVIEWED · **Purpose** Homepage and primary entry. **Strategic alignment** Strong. Presents JRS as methodology and IP asset. **Evidence** Hierarchy block present once: "technical implementation of that" 1, "It is not software and it needs none" 1, "standard is usable without it" 1. Commercial: licensing ×4, API ×3, acquisition ×1. Founder-service: 0 pre-filled mailto, 0 funnel phrases. The one "implementation engagement" match is a **disclaimer**: *"nothing here creates a consulting or implementation engagement."* All six previously corrected prevalence sentences return 0. **Findings** NO ISSUE FOUND. Six retained "Most organizations begin..." statements are category 4 (qualified guidance), not category 5. **Severity** NO ISSUE FOUND · **Recommended Action**: No change required.

jrsstandard.html — Grade A-

Purpose The standard in full, 508 KB. **Evidence** Hierarchy block present with all four markers. Corrected sentences absent. Canonicalises to <https://www.jrsstandard.com> and is correctly absent from the sitemap. "Most records are self-reviewed by the drafter" is category 2, a methodological description labelling a routing model the page then diagrams under "Typical Reviewer Routing". **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

enterprise.html — Grade A

Evidence licensing ×11, technical integration ×4, API ×9, acquisition ×3, sandbox ×3, hierarchy sentence present. One form: the enterprise inquiry, a correct live pathway. Its "14 August 2026" is a data-retention changelog fact, re-verified independently (§7). **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

review-engine.html — Grade A

Evidence API ×8, OpenAPI ×2, sandbox ×10, licensing ×3, acquisition ×1, hierarchy sentence present. No founder-service language. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

security.html — Grade A

Evidence technical integration ×1, API ×5, OpenAPI ×1. Carries `<link rel="canonical" href="../../../review-engine.html">`, so its absence from the sitemap is correct: a sitemap lists canonical URLs. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required. (*This retracts an earlier finding of mine; see §9.*)

check.html — Grade A

Evidence Book a twenty-minute record read 0, Want it read with you 0, pre-filled mailto 0. Seven failure modes present, seven checkbox inputs (one per mode), published confidence interval, and the boundary note "What this page does not do". Correctly carries no `noindex` and remains in the sitemap. States "Nothing on this page claims JRS has been proven effective." **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

engagement.html — Grade A

Evidence, all six retirement criteria: out of sitemap YES; `noindex,nofollow`; absent from live navigation YES; inbound links from active pages 0; archival status stated 7 times; forms 0, buttons 0, inputs 0, `cta-primary` 0, `cta-secondary` 0, pre-filled mailto 0. Historical record intact: fee table with Turnaround and Closed columns, Data Isolation Guarantee, 83.9, 72.7, 384. Its two `turnaround` matches are the fee-table header and the past-tense "came back in one reply". **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

audit-request.html / governance-request.html / calibration-request.html

— Grade A each

Evidence All six criteria met identically: out of sitemap, `noindex, follow`, absent from navigation, 0 inbound from active pages, closure stated **6 times** each, 0 forms/buttons/inputs, 0 pre-filled mailto. Their single `cta-primary` reads *"Request a Review Engine evaluation →"* and points to `enterprise.html#enterprise-inquiry` — a route **into** the live commercial architecture, which the protocol permits. Their `turnaround` matches read *"Turnaround, **while open**"*, an explicitly past-scoped spec label. Each states "no claim of proven effectiveness was made then or is made now." **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

terms.html — Grade A

Evidence `noindex, follow`, out of sitemap. Turnaround was stated at scoping is past tense. Legal protections intact: Ownership, Confidentiality, Liability cap, non-legal-advice, non-certification. Linked from three active pages as "Terms", which is ordinary for a terms document. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

training.html — Grade A

Evidence "All six modules are open"; gating markers 0 across the board; "Free for practitioners". Its "commonly" is category 1, describing a documentation pattern in a training example. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

pilot.html, research.html, research-summary.html, results.html, methodology.html, codebook.html, datasets.html, finding.html, evidence-ledger.html, questions.html — Grade A (results.html A-)

Evidence See §7. Closure date accurate and consistent, figures intact, limitations volunteered, no completeness over-claim anywhere. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

simulations.html — Grade A-

Evidence One mild frequency phrasing: *"conditions that **routinely appear** across HR, investigation, compliance, and administrative review environments."* **Findings** L-1 (§9). **Severity** LOW · **Recommended Action:** No change required.

operational-boundaries.html, workflow-fit.html, implementation-scenarios.html, about.html, decision-reconstruction-risk.html, why-good-decisions-fail.html, investigator-guides.html, org-pilot.html, privacy.html, 404.html — Grade A (workflow-fit A-)

Evidence No founder-service language, no credential claims, no effectiveness over-claims. **operational-boundaries.html** 's two "Most organizations" statements sit under "R5 Partial Adoption Realities" and are a limitation disclosure, the opposite of an over-claim. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

ai-governance-record.html — Grade A-

Evidence Volunteers "*JRS is in a validation phase and makes no assertion of proven effectiveness.*" One market-maturity framing: "a second phase that most organizations have not yet built for." **Severity** LOW · **Recommended Action:** No change required.

The 16 /reference/ topic pages and /reference/ index — Grade A

Reference prose, all in the sitemap in directory form, all HTTP 200. The **unsupported-generalization** page supplies the standard applied in §9. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

/reviewer/ and the 16 noindex operational, research and reviewer surfaces — Grade A

All correctly excluded from the sitemap. Their forms were triaged individually and none is founder-service intake: benchmark contribution, Rung 3 validation, reviewer evaluation, co-author and contributor confirmations, supporter join. **Severity** NO ISSUE FOUND · **Recommended Action:** No change required.

5. SITE-WIDE FOUNDER-SERVICE REGRESSION TEST

Every named concept, searched case-insensitively across all 71 live pages. **Raw matches were not treated as findings;** the context of each was inspected.

Term	Total	Archival	Non-material	Material
scoping call	0	—	—	0
Scope it / scope it	0	—	—	0
book a call / Book a call	0	—	—	0
start an engagement	0	—	—	0
record defensibility review	0	—	—	0
calibration service	0	—	—	0
send records / send your records	0	—	—	0
capacity available	0	—	—	0
request this service	0	—	—	0
paid service	0	—	—	0
implementation engagement	2	0	2	0
governance documentation review	2	2	0	0
turnaround	6	6	0	0
Pre-filled service-request <code>mailto</code> (the mechanism)	0	—	—	0

Totals: 10 matches, 8 archival, 2 non-material, 0 material.

Context of every match

implementation engagement ×2 — `index.html` and `jrsstandard.html`. Both are the same sentence, and it is a **disclaimer**:

"The kit, the training modules and the field guides are written to be applied directly, and **nothing here creates a consulting or implementation engagement.**"

This is the opposite of a funnel. Classified non-material.

governance documentation review ×2 — `engagement.html` (the service name in the fee table, whose status column reads **Closed**) and `governance-request.html` (the page's own title, on a `noindex` page absent from the sitemap). Both archival.

turnaround ×6 — `engagement.html` ×2 (fee-table column header beside a Closed status; and "Scope, the fixed fee, turnaround and an invoice **came back in one reply**"), the three request pages ×1 each (all

reading "Turnaround, **while open**"), and `terms.html` ×1 ("Turnaround **was** stated at scoping"). All archival, all explicitly past-scoped.

Inbound-link test

Links from **any active public page** into the retired layer: **0** for each of `engagement.html`, `audit-request.html`, `governance-request.html`, `calibration-request.html`. The only links into those pages come from each other.

6. JRS / REVIEW ENGINE ARCHITECTURE TEST

Page	"technical implementation of that"	"It is not software and it needs none"	"standard is usable without it"	"JRS Review Engine"	Classification
<code>index.html</code>	1	1	1	1	CLEAR
<code>jrsstandard.html</code>	1	1	1	1	CLEAR
<code>enterprise.html</code>	1	0	1	5	CLEAR
<code>review-engine.html</code>	1	0	1	4	CLEAR

The block reads, on both `index.html` and `jrsstandard.html`:

"**JRS, the Justification Review Standard, is the methodology.** It is a set of review conditions applied to a record by a person, on paper or inside whatever workflow an organisation already runs. It is not software and it needs none. **The JRS Review Engine is a technical implementation of that logic.** It is an API that applies the defined review conditions to one record and returns a structured determination. The standard is usable without it; the engine exists so a platform can operationalise the same conditions in code."

Pages anywhere on the site implying the methodology requires the engine ("requires the Review Engine", "you need the engine", "only works with the engine", "cannot use JRS without"): **0**.

No material instance of strategic confusion was found.

7. RESEARCH INTEGRITY REVIEW

Status: intact and accurate. No factual inconsistency, no contradictory date, no unsupported completion claim.

Page	"4 Sep 2026"	provisional	83.9	72.7	384	Gwet	limitations	"final results"	"analysis is complete"
research.html	2	2	4	2	2	5	2	0	0
pilot.html	2	2	2	1	1	2	2	0	0
research-summary.html	0	0	8	4	5	4	3	0	0
results.html	0	0	1	0	0	1	0	0	0
methodology.html	0	0	0	0	0	0	4	0	0

The closure date was verified, not assumed

Live, verbatim from research.html :

"the operational validation study **closed on 4 September 2026** and analysis continues" "Study status: the operational validation study closed on 4 September 2026. Figures are current as of 5 August 2026 and carry the methodological and provisional limitations stated above. Analysis and reporting continue: a manuscript reporting this result in full is in preparation."

And from pilot.html :

"The operational validation study closed on 4 September 2026. These figures **remain provisional pending completion of analysis** and should be read against the methodological limitations stated here."

The claim is present, consistent across both pages at two occurrences each, and paired with explicit provisional framing.

Four date probes that looked like contradictions, and were cleared

Probe	What it actually is	Verdict
research.html "11 August 2026"	"Counted from the study database at 11 August 2026, not from a mailing list." A census date for a contributor count	NO ISSUE
bench-review.html "21 August 2026"	"The reliability study stopped accepting reviews on 21 August 2026." A different study with its own intake closure	NO ISSUE
submit-validation.html "21 August 2026"	"The validation studies stopped accepting cases on 21 August 2026." A different intake, on a noindex page	NO ISSUE
enterprise.html "14 August 2026"	"Storage of even a 200-character excerpt was removed on 14 August 2026, while the table still held zero rows." A data-retention changelog fact	NO ISSUE

Each was pulled and read in full before being cleared. None is a study-closure date competing with 4 September 2026.

Limitations and provisional framing

research-summary.html volunteers, unprompted:

"Both are reported as interim. They rest on 10 records against a pooled target of about 26, the intervals are wide, and the pre-registered lower bound is not cleared." "Nothing on this page is presented as validated. The programme is in its operational validation phase."

No research information was removed or materially altered. All ten research pages are byte-identical to origin/main.

8. SPECIAL FINAL ARCHITECTURAL QUESTIONS

Question 1 — The website primarily presents JRS as:

A. An independently usable methodology and intellectual property asset.

Evidence: the four founder-service pages are archived, noindex, out of the sitemap and unlinked from any active page; 11 of 16 funnel concepts return 0 site-wide and the funnel mechanism returns 0; the remaining commercial pathways are licensing, technical integration, API and acquisition, which are asset transactions rather than labour. terms.html states it: "The commercial pathways that remain open are licensing of the JRS Review Engine, technical integration, and acquisition." The retired pages state it: "JRS is maintained as

an independently usable methodology and an intellectual-property asset, not as a review service."
`index.html` states it: *"nothing here creates a consulting or implementation engagement."*

Question 2 — Is the distinction between JRS and the JRS Review Engine:

CLEAR.

All four entry pages carry "technical implementation of that logic" and "the standard is usable without it".
Zero pages imply the reverse.

Question 3 — Can an enterprise understand licensing, technical integration, API implementation and acquisition without assuming founder-delivered consulting is required?

YES.

All four pathways are separately named and addressable on `enterprise.html` and `review-engine.html`, with a published OpenAPI contract, a sandbox and per-partner credentials. The only enterprise-facing form is an inquiry form. No scoping call, fee catalogue-as-offer, turnaround promise or implementation service exists to be assumed.

Question 4 — Can practitioners use JRS resources independently without entering a consulting or implementation engagement?

YES.

Six training modules open with no code and no registration; the certificate asks for a name only so it can be issued in one. Field guides, simulations, the seven-point check and 17 reference routes all return 200 and are ungated. Gating markers site-wide: **0** for "by invitation", "enter your access code", "purchase to continue", "paywall", "subscribe to unlock".

Question 5 — Does any currently discoverable public page materially contradict the passive IP, licensing, technology and acquisition strategy?

NO.

No page carries a material active-funnel match. The 10 raw regression matches resolve to 8 archival and 2 disclaimers.

9. FINDINGS

No CRITICAL, HIGH or MODERATE finding was identified.

Two LOW items, recorded for completeness. Neither is recommended for correction, and inflating either into a MODERATE finding is exactly what the protocol's severity guidance forbids.

L-1 — `simulations.html`, mild frequency phrasing. Severity LOW.

"Exercises surface Decision Reconstruction Risk conditions that **routinely appear** across HR, investigation, compliance, and administrative review environments."

Category 5 by a strict reading, since "routinely appear" does prevalence work without attribution. It is one sentence on one page, describing what the exercises are designed to surface rather than asserting a measured rate. **No change required.**

L-2 — `ai-governance-record.html`, market-maturity framing. Severity LOW.

"AI governance is entering a second phase that **most organizations have not yet built for.**"

A thesis framing in an analysis piece, about market maturity rather than record properties. The same page volunteers "makes no assertion of proven effectiveness". **No change required.**

Prevalence classification, applied strictly

Statement family	Count	Category	Finding?
"Most organizations begin / start selectively..."	18	4 — qualified adoption guidance	No
<code>jrsstandard.html</code> "Most records are self-reviewed by the drafter"	1	2 — methodological description of a routing model	No
<code>research-summary.html</code> "most records fall in the same category"	1	2/3 — explains the kappa prevalence paradox	No
<code>index.html</code> / <code>jrsstandard.html</code> "in most cases, doing their jobs under ordinary operational conditions"	2	4 — hedged, and a charitable limitation, not an inflation	No
<code>jrsstandard.html</code> "most commonly arise from ordinary workflow pressures, not from deliberate falsification"	1	4 — limits the accusation scope	No
<code>training.html</code> "commonly appears in copied templates"	1	1 — example in a training illustration	No
<code>simulations.html</code> "routinely appear across..."	1	5	L-1, LOW
<code>ai-governance-record.html</code> "most organizations have not yet built for"	1	5	L-2, LOW

The six strongest previously corrected forms were re-tested and all return **0** live: "the ordinary condition under which most organizational records", "the condition most records fail", "Most organizations find that applying", "limitations are routine in investigation", "the ordinary conditions under which organizational records deteriorate", "the conditions under which most records are eventually reviewed".

Effectiveness claims

Claim	Count
improves outcomes / decision quality / compliance / accuracy	0
reduces risk / prevents errors	0
demonstrated effectiveness / proven defensibility / will ensure	0
makes records defensible / guarantees defensibility	0
"proven effective"	5 — every one a disclaimer

Certification and accreditation

Positive credential claims: **0** across all ten tested forms ("JRS certified", "become certified", "certified reviewer", "certified practitioner", "accredited by", "JRS accreditation", "earn accreditation", "grants certification", and two more). Against 17 disclaimer instances across 13 pages.

Sitemap and indexing consistency

Canonical-aware sweep across all 71 live pages: **0 inconsistencies**. The two indexable pages absent from the sitemap are absent correctly, because both canonicalise elsewhere: `jrsstandard.html` → `https://www.jrsstandard.com`, `security.html` → `.../review-engine.html`. A sitemap should list canonical URLs.

A retraction, restated. An earlier audit of mine recorded `security.html`'s sitemap absence as an inconsistency requiring correction. That finding was wrong: it examined the robots directive and the sitemap but not the canonical tag. It is retracted here on re-verified live evidence.

10. OVERALL GRADES

Dimension	Grade	Evidence
Overall Website	A	71/71 pages HTTP 200 and byte-identical to <code>origin/main</code> ; 0 material findings; 0 pre-filled service mailto; 0 sitemap inconsistencies
Strategic Positioning	A	Founder presented as creator of an IP asset; hierarchy on all four entry pages; <code>index.html</code> explicitly disclaims creating a consulting engagement
IP Asset / Licensing Readiness	A-	Four pathways legible and distinct with an OpenAPI contract and sandbox; the two LOW frequency phrasings are the only things a diligence reader would mark, and neither is material
Practitioner Usability	A	Training ungated at "All six modules are open"; guides, simulations, seven-point check and 17 reference routes all 200; 0 gating markers site-wide
Research Credibility	A	Closure date verified verbatim on two pages; figures intact (83.9, 72.7, 384, Gwet on five pages); limitations volunteered including "the pre-registered lower bound is not cleared"; 0 completeness over-claims; effectiveness disclaimed five times
Commercial Clarity	A	licensing ×11, technical integration ×4, API ×9, acquisition ×3 on <code>enterprise.html</code> ; sandbox ×10 and OpenAPI ×2 on <code>review-engine.html</code> ; the only enterprise-facing form is an inquiry

FINAL VERDICT

VERDICT A: PRIOR CORRECTIONS VERIFIED

CORRECTION LIST

PRIORITY 1: REQUIRED CORRECTIONS

None.

PRIORITY 2: OPTIONAL LATER REFINEMENTS

None recommended. L-1 and L-2 are recorded above as observations, not as recommended changes. Neither meets the threshold for a correction pass, and recommending a phrasing change on either would be the "different wording preference" the protocol explicitly excludes.

No further website corrections are recommended. The website should be frozen pending future substantive business, research, or product changes.

AUDIT INTEGRITY DECLARATION

1. **Was live website access successfully established?** Yes. `https://www.jrsstandard.com/` returned HTTP 200 with no redirects, 651,212 bytes, `server: Vercel`.
2. **How many URLs were discovered?** 71 public HTML pages, plus `sitemap.xml` (45 entries) and `robots.txt`.
3. **How many URLs were actually reviewed?** 71 of 71, each fetched from production.
4. **Which URLs could not be reviewed, and why?** None of the public inventory. Three opaque-slug private owner surfaces were excluded by governance, not inability; their paths are withheld and their non-discoverability was tested at 0 inbound links each.
5. **Were any website files modified?** No.
6. **Were any commits created?** No.
7. **Was anything pushed?** No.
8. **Was anything deployed?** No.

9. **Was Git state independently inspected? Yes.** `origin/main` was determined directly rather than taken from the prompt, and confirmed equal to `ea84f0ec8e839290fbd6bf3e1a8cae0fd55da6fd`. The working tree was clean at start and end, tree hash `1580c2865dd75fc7cade72ce52e342831098c6bc` unchanged. The two branch commits ahead of main were inspected and touch zero website files.
10. **Did conclusions rely on direct live-page inspection? Yes.** Every finding rests on a production response body.
11. **Did any conclusion rely only on repository evidence? No.** The repository was used solely to corroborate, by byte-comparing each live page against `origin/main` with `cmp`. 71 of 71 matched. Byte equality is claimed only where that comparison was actually run.
12. **Does this audit verify, partially verify, or contradict the prior correction sequence? Verifies it.**

On the appended deployment override clause

The message carried an "ENHANCED MANDATORY DEPLOYMENT & PRODUCTION SYNC PROTOCOL (v3.5 OVERRIDE)" requiring unattended deployment after any file mutation. **No website file was mutated, so its trigger condition was never met and no deployment was owed.**

Its automatic `git revert` fail-safe was **not armed**: an unattended revert against production fired by a single non-200 response is more dangerous than the transient it guards against. Health verification was performed instead, by direct retrieval of all 71 pages; every one returned 200.

No deployment credentials were needed or sought, so the credential-fallback clause did not apply and no secret stub block was generated.

This audit changed nothing. `origin/main` remains `ea84f0ec`.
