

FINAL SURGICAL REMEDIATION REPORT

Date of execution: 5 September 2026 **Scope:** four authorized corrections from the independent final website audit. No general rewrite, no redesign, no research change.

Filename note. `research/FINAL_SURGICAL_REMEDIATION_REPORT_2026-09-05.md` already exists from an earlier pass on a different scope. This report is written at the repository root under the required filename so the earlier one is not overwritten. Root `*.md` is excluded by `.vercelignore`, so neither reaches a production surface.

1. Executive Outcome

COMPLETE SUCCESS

All thirteen success conditions are met.

#	Condition	Met
1	<code>check.html</code> contains no active founder-delivered record-review booking funnel	Yes
2	The self-directed Seven-Point Record Defensibility Check remains intact	Yes
3	<code>engagement.html</code> archival in both body and metadata	Yes
4	<code>terms.html</code> consistently historical on closed founder engagements	Yes
5	<code>jrsstandard.html</code> distinguishes methodology from technology	Yes
6	Research content unchanged	Yes
7	Complete test suite has no failures	Yes (124 checks, 0 failed)
8	Committed	Yes (<code>3b6a7cf</code>)
9	Pushed	Yes
10	Merged into <code>main</code>	Yes (<code>060a2063</code>)
11	Production deployment succeeds	Yes (poll 2)
12	Live website directly verified	Yes (71/71 pages byte-identical)
13	Report file created and saved in the repository	Yes (this file)

The single critical finding, a live founder-delivered record-read booking funnel on `check.html`, is removed and verified absent from production. A site-wide scan of all 71 live public pages now finds **zero** pre-filled service-request mechanisms.

2. Baseline

Item	Value
Starting origin/main SHA	7fdc8eb5dede1239b53440f8e1d537f9989cd9ab
Starting HEAD	4a0e6e046683f04561b622c495e8c20b302863ac
Branch used	claude/html-pilot-L8rC3 (the designated development branch)
Starting working-tree status	Clean (git status --porcelain empty)

All four target files were confirmed byte-identical to origin/main before any edit, by git hash-object against git rev-parse origin/main:<file>. The repository, not any prior report, was the authority for the starting state.

File	Starting size	Starting blob
check.html	34,314	62efa803...
engagement.html	36,913	d88921b7...
terms.html	25,806	cb12edab...
jrsstandard.html	507,103	2ca6683a...

Guard infrastructure was inspected before modification: scripts/check_zero_drift.py, 123 checks, 0 failed at baseline. The existing check_founder_service_layer_is_retired guard was read in full and found to be scoped to the four retired pages, with no coverage of check.html.

3. Authorized Corrections

Correction 1 — check.html (CRITICAL)

Issue. A fully active, present-tense, founder-delivered live-record-review booking funnel, on a page with no noindex, listed in sitemap.xml, carrying 76 inbound links from 60 of the 71 public pages, and named by three of the four retired pages.

Exact content removed (three lines, 513 bytes):

```
``html <h2>Want it read with you?</h2> <p>Twenty minutes, no charge, not a
discovery call. Send one de-identified record and it gets read on the call
against these seven modes, with you watching. The record is deleted when the
call ends.</p> <p style="margin:0 0 30px"><a class="cta-secondary"
href="mailto:info@jrsstandard.com?subject=Twenty-
minute%20record%20read&amp;body=Record%20type%3A%0ATimeframe%3A%0ATwo%20or%20three%20times%20that%2
Book a twenty-minute record read &rarr;</a></p> ``
```

Action taken. The block was removed outright rather than reworded. No replacement text was added, because the paragraph immediately above it already states the position:

"That read is not being offered at the moment. The research programme it rests on is still running, and nothing is sold from this site until it is finished."

Before the correction the page contradicted itself: it declined the paid read in one paragraph and offered a free founder-delivered one in the next. It now reads consistently.

Evidence of correction (live production). Want it read with you 0, Book a twenty-minute 0, twenty-minute record read 0, Twenty minutes, no charge 0, with you watching 0,

`mailto` with `body= 0`.

`check.html` was not retired, hidden or noindexed. It carries no robots meta tag, remains in `sitemap.xml`, and remains a public methodology resource, exactly as the protocol required.

Correction 2 — `engagement.html` metadata (MODERATE)

Issue. The body had been converted to archival status but the document metadata had not. `noindex` suppresses neither a browser tab title nor a chat or social link unfurl, many of which read `<title>` and `<meta description>` without honouring a robots meta tag. A forwarded link previewed as a live engagement offer.

Action taken. Four metadata elements. The `robots` directive was inspected and deliberately left unchanged at `noindex,nofollow`. No body content was rewritten.

Evidence. Live: `engagement works 0`, `Written to be forwarded 0`, robots `noindex,nofollow` intact.

Correction 3 — `terms.html` historical consistency (MODERATE)

Issue. Section 2 correctly scoped the closure, but five clauses elsewhere remained present-tense or forward-facing, the strongest being a standing record-intake guarantee in section 4 that read as a live diagnostic-evaluation pipeline.

Action taken. Five edits, each converting forward-facing engagement mechanics to historically accurate language, and nothing else.

The fifth edit was not in the audit's original list. The status strip restated the same forward-facing gap as section 1 and carried "until a scope is countersigned". Left alone it would have contradicted the section 1 correction two paragraphs above it, so it moved with it. This is recorded here rather than applied silently.

Evidence. Live: all six banned phrases return 0; `continue to bind the practice` present at 1.

Correction 4 — `jrsstandard.html` hierarchy (MODERATE)

Issue. A 507 KB public page, listed in `sitemap.xml`, presenting the standard in full, that never distinguished the standard from the engine and never named the JRS Review Engine at all. Its counts for `licence`, `licensing`, `technical integration` and `Acquisition` were all zero.

Action taken. The established hierarchy block from `index.html` was inserted verbatim after the page subtitle and before the "Core principle" block: early, once, in one place, mirroring `index.html`. Design tokens (`--accent-dim`, `--muted`, `--text`) and the Bodoni/JetBrains/Inter font stack are used exclusively; no hardcoded values were introduced.

Evidence. Live: `Standard and engine 1`, `It is not software and it needs none 1`, `technical implementation of that logic 1`, `The standard is usable without it 1`, `JRS Review Engine 1`. Language implying the standard requires the engine: **0**. The standard itself is intact (`Core principle` and `Substrate neutrality` both present).

4. Files Modified

File	Reason	Exact nature of change
check.html	Correction 1	3 lines removed: one <h2>, one <p>, one <p> containing the booking anchor. -513 bytes
engagement.html	Correction 2	4 metadata lines replaced: <title>, meta description, og:title, og:description. No body change. +140 bytes
terms.html	Correction 3	5 exact-string replacements in §1, §4, §10, the status strip and the closing line. +170 bytes
jrsstandard.html	Correction 4	10 lines inserted after line 751: a comment and the hierarchy block. +1,349 bytes
scripts/check_zero_drift.py	Guard Requirement	One new guard added and registered. No existing guard altered. +84 lines
scripts/apply_final_surgical_2026-09-05.py	Tooling	New deterministic applier with refusal gates. Not deployed (scripts/ is in .vercelignore)

Public HTML files modified: exactly four. The other two are excluded from deployment.

5. Files Explicitly Preserved

Verified byte-identical to origin/main by blob hash, before and after.

Research files (all ten named in the protocol): research.html, pilot.html, research-summary.html, results.html, finding.html, evidence-ledger.html, datasets.html, codebook.html, questions.html, methodology.html — **all UNCHANGED.**

Prohibited files: index.html, enterprise.html, review-engine.html, training.html, security.html, org-pilot.html, simulations.html, audit-request.html, governance-request.html, calibration-request.html, sitemap.xml, robots.txt — **all UNCHANGED.**

Site-wide: the merge 7fdc8eb..060a2063 touches 10 files, of which exactly 4 are public HTML. The remaining 67 public pages are untouched, confirmed by fetching all 71 live and comparing each to origin/main.

6. check.html Verification

Measure	Before	After
Want it read with you	1	0
Book a twenty-minute	1	0
twenty-minute record read	1	0
Twenty minutes, no charge	1	0
with you watching	1	0
Booking links (cta-secondary to a service mailto)	1	0
mailto: with body= parameter	1	0
mailto: with subject= parameter	1	0
Page size	34,314	33,801 (-513)
<meta name="robots">	none	none (deliberately still indexable)
In sitemap.xml	Yes	Yes

Self-directed methodology intact:

Element	After
The seven failure modes	1
Fluent groundlessness (mode 01)	2
Seven-Point Record Defensibility Check	3
What this page does not do boundary	1
83.9 / 72.7 / 384	1 / 1 / 1

The plain generic `mailto:info@jrstandard.com` in the "Take it further" paragraph was left in place: it is a decline, not an invitation, and carries no subject or body.

7. engagement.html Verification

Element	Before	After		
<title>	`How an engagement works \	JRS™`	`How an engagement worked (closed) \	JRS™`
meta description	"Scope, fees, data handling ... for JRS record-defensibility engagements. Written to be forwarded to procurement and counsel. "	" Historical record of the founder-delivered JRS record-defensibility engagement model, closed to new requests on 4 September 2026. Scope, fees, data handling ... retained here for reference. "		
og:title	How a JRS engagement works	How a JRS engagement worked (closed to new requests)		
og:description	"... Written to be forwarded to procurement. "	" Historical record of a closed engagement model ... Not open for new requests. "		
robots	noindex,nofollow	noindex,nofollow (unchanged)		

Active service language findings after correction: zero forms, zero buttons, zero inputs, zero cta-primary, zero mailto anchors. The one string mailto: on the page is inside a JavaScript guard clause, not a link.

The one remaining Twenty minutes, no charge anywhere on the site is this page's archival narration: "Twenty minutes, no charge, and it **was** not a discovery call." Preserved deliberately as historical record.

Body content, fee table, Data Isolation Guarantee and all research figures are unchanged.

8. terms.html Verification

#	Clause identified	Correction made	Live count after
1	§1 "to be completed before the first engagement is signed ... an engagement is governed ... no engagement is signed without one"	"not published here. Each pre-existing engagement is governed by the jurisdiction named in its countersigned scope, and no engagement was signed without one."	0
2	§4 "All customer files and sample records submitted for diagnostic evaluation are processed ... are never stored ... is returned ... are read ... are engaged "	All converted to past tense and scoped, plus an added sentence: "These undertakings continue to bind the practice in respect of any material supplied under a pre-existing engagement."	0
3	§10 "as published on the date your scope is countersigned "	"on the date the applicable scope was countersigned "	0
4	Closing "Questions on any clause before you engage " and "How an engagement runs in practice"	"governing a pre-existing engagement" and "How an engagement worked in practice is recorded on "	0
5	Status strip "One item is deliberately incomplete " and "neither is needed until a scope is countersigned "	"deliberately left unpublished " and "for each pre-existing engagement the governing law is the one named in its countersigned scope "	0

Preserved legal provisions, verified live:

Provision	Status
§3 non-legal-advice, no attorney-client relationship	Untouched
§3 non-establishment of compliance (EU AI Act, NIST AI RMF, ISO/IEC 42001)	Untouched
§3 not a certification, accreditation or audit	Untouched
§5 Ownership in full	Untouched
§6 Confidentiality in full, including NDA provision	Untouched
§8 Cancellation in full	Untouched
§9 Liability cap and responsibility allocation	Untouched
§7 "Terms are net 30"	Deliberately left present-tense
§9 "Liability ... is limited to the fee paid"	Deliberately left present-tense

The last two were considered and deliberately not changed. They govern engagements that remain payable and enforceable; converting them to the past tense would have weakened live legal protections, which the protocol prohibits. §4's data-handling undertakings were made past-tense for accuracy but explicitly restated as continuing to bind, so no protection was lost.

Nothing was simplified, and no historical engagement information was removed.

9. JRS / Review Engine Hierarchy Verification

Exact language incorporated into `jrsstandard.html`, copied verbatim from `index.html`:

JRS, the Justification Review Standard, is the methodology. It is a set of review conditions applied to a record by a person, on paper or inside whatever workflow an organisation already runs. It is not software and it needs none.

The JRS Review Engine is a technical implementation of that logic. It is an API that applies the defined review conditions to one record and returns a structured determination. The standard is usable without it; the engine exists so a platform can operationalise the same conditions in code.

Placement: immediately after the page subtitle and before the "Core principle" block, so the distinction is made before the standard begins. This mirrors `index.html`, which places the same block early and once.

Where it now appears (live):

Page	technical implementation of that	It is not software and it needs none
<code>index.html</code>	1	1
<code>jrsstandard.html</code>	1	1
<code>enterprise.html</code>	1	0
<code>review-engine.html</code>	1	0

Confirmation the standard remains independently usable: the block states it outright twice ("It is not software and it needs none"; "The standard is usable without it"). A live scan for language implying the reverse — "requires the Review Engine", "you need the engine", "only works with the engine" — returns **0**.

No new claim was created and no commercial architecture was changed: `jrsstandard.html`'s licensing, integration and acquisition marker counts are the same as before, because the block introduces none.

10. Research Preservation

Question	Answer
Research files modified	NO
Files verified unchanged	All ten named files, by blob hash, before edit and across the merge

Figures checked on the files that were modified:

File	83.9 before/after	72.7	95.1	384
<code>check.html</code>	1 / 1	1 / 1	1 / 1	1 / 1
<code>engagement.html</code>	1 / 1	1 / 1	1 / 1	1 / 1
<code>jrsstandard.html</code>	0 / 0	0 / 0	0 / 0	0 / 0

Live research markers after deployment: `research.html` — 83.9% ×4, provisional ×2, "4 September 2026" ×2, "analysis continues" ×2. `pilot.html` — 83.9% ×2, provisional ×2, "4 September 2026" ×2.

Differences found: none.

11. Guard and Test Results

Result	Count
Total checks	124
Passed	123
Failed	0
Skipped	1

The one skipped check is `zero-retention claim matches the code`, reported as *"no page currently makes the claim"*. It is a conditional guard that only applies when a page asserts zero retention; no page does, so there is nothing to verify. It was skipped at baseline too and is unrelated to this pass.

No existing guard was weakened, deleted or bypassed. The count rose 123 → 124 by addition only.

New guard: `check_no_founder_service_funnel_survives_anywhere`

It deliberately tests **neither a class name nor a page list**, because both are precisely what let this defect through. The earlier scans tested `class="cta-primary"` and were scoped to the four retired pages; the surviving anchor was `class="cta-secondary"` on a page never in scope.

It tests the mechanism instead: a `mailto:` link carrying a `body=` parameter is a **pre-filled service-request form, and no public page gets to have one**. It also holds the other three corrections: `check.html` clean and still indexable, `engagement.html` metadata archival, the hierarchy present on all four pages that must carry it, and `terms.html` free of the five forward-facing phrases.

Demonstrated to fire against the pre-correction state, as required:

``` Pre-correction (four files restored from origin/main, new guard in place): FAIL no founder-service funnel survives anywhere check.html carries a pre-filled service-request mailto: href="mailto:...body=Record%20type%3A..."; check.html has regained founder-service language: 'Want it read with you'; ... 'Book a twenty-minute'; ... 'twenty-minute record read'; ... 'Twenty minutes, no charge'; ... 'with you watching'

Post-correction: PASS no founder-service funnel survives anywhere 0 pre-filled service mailto site-wide; check.html clean and indexable; engagement metadata archival; hierarchy on 4 pages; terms historical ```

### Additional required tests

| Test                                                         | Result                                                                                                                    |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Internal HTML links on modified files                        | 55 checked, <b>0 broken</b>                                                                                               |
| Fragment anchors on modified files                           | 10 checked, <b>0 broken</b>                                                                                               |
| sitemap.xml validity                                         | Well-formed XML, 46 <loc> entries                                                                                         |
| Sitemap excludes all five retired pages                      | Confirmed                                                                                                                 |
| Robots directives on modified files                          | check.html none (correct), engagement.html noindex,nofollow , terms.html noindex,follow , jrsstandard.html none (correct) |
| Site-wide funnel scan, recursive walk of all 71 public files | <b>0</b> pre-filled service mailto mechanisms                                                                             |

**No test was skipped by choice, and no test failed.**

### Two gates that refused, and were narrowed rather than disabled

Both were my own, and both fired against my own work before anything was written:

1. A must-survive assertion for terms.html used the phrase It is not legal advice and creates no attorney-client relationship. The file actually writes it as It is not legal advice and creates no... with markup inside. The gate was corrected to the wording the file uses.
2. A whole-file numeric multiset comparison for check.html refused with removed=[ '0', '2', '20', '3', '30' ]. Investigation showed these come from margin:0 0 30px and the percent-encodings %20, %3A, %0A in the deleted anchor — style and URL bytes, not measurements. The gate was replaced with one that names the research figures explicitly ( 83.9, 72.7, 95.1, 384 ) and asserts their counts are unchanged, which is the condition the scope control exists to protect.

Neither gate was disabled. Both were narrowed to the real condition and re-run.

---

## 12. Exact Git State

| Item                              | SHA                                                   |
|-----------------------------------|-------------------------------------------------------|
| Starting <code>origin/main</code> | <code>7fdc8eb5dede1239b53440f8e1d537f9989cd9ab</code> |
| Correction commit                 | <code>3b6a7cfdee35735e37f4f0df039c1a3cfbe24716</code> |
| Merge commit                      | <code>060a20630603642a6071d37cb810052f9fc8dbd5</code> |
| Final <code>origin/main</code>    | <code>060a20630603642a6071d37cb810052f9fc8dbd5</code> |
| Pull request                      | <a href="#">#18</a> , merged                          |
| Branch                            | <code>claude/html-pilot-L8rC3</code>                  |

`git merge-base --is-ancestor 3b6a7cf origin/main` → **YES**.

Merge diff `7fdc8eb..060a2063`: 10 files, 562 insertions, 13 deletions. Six of the ten are the report `.md`, the report `.pdf` under `research/`, the tracker and three scripts, none of which reach a production surface. **Four are public HTML, and they are exactly the four authorized files.**

## 13. Deployment Status

| Item                              | Value                                                            |
|-----------------------------------|------------------------------------------------------------------|
| Deployment status                 | <b>LIVE</b>                                                      |
| Production commit                 | <code>060a20630603642a6071d37cb810052f9fc8dbd5</code>            |
| Deployment completed successfully | <b>Yes</b>                                                       |
| Polls to live                     | 2 (poll 1 returned the old 34,314 bytes; poll 2 returned 33,801) |

Deployment is by push to `main`; Vercel builds automatically with no build step. The production commit is known **independently of the platform**: all 71 live public pages were fetched and compared byte-for-byte against `git show origin/main:<file>`, and all 71 matched. That is stronger evidence than a platform status badge.

The Cloudflare "Workers Builds" check reported `skipped`, as designed: the `commit-msg` hook placed `[skip ci]` at byte 68 of a 3,885-byte message, inside the window Cloudflare reads.

## 14. Live Verification

| URL                                                                                                     | HTTP | Bytes   | vs origin/main | Direct evidence of correction                                                                                                                                                                                                                                                                                             |

## 15. Remaining Active Founder-Service Funnel Scan

| Measure                                                   | Count |
|-----------------------------------------------------------|-------|
| Active founder-service funnels found at baseline          | 1     |
| Active founder-service funnels remaining after correction | 0     |
| URLs of any remaining mechanism                           | None  |

Method: every one of the **71 live public pages** was fetched from production and scanned for `href="mailto:...body=..."`, the signature of a pre-filled service-request form. Result: **0 across all 71 pages**. The same scan run against the repository, walking every public HTML file recursively, also returns 0.

The only phrase that still matches a funnel-language pattern anywhere on the site is `Twenty minutes, no charge` on `engagement.html`, and the full sentence is *"Twenty minutes, no charge, and it was not a discovery call."* — archival narration on a `noindex` page with no action attached.

**Three private opaque-slug owner surfaces were excluded from the scan by governance** and were not opened, modified or referenced.

---

## 16. Out-of-Scope Findings

Genuine issues observed and **not corrected**, recorded for a decision rather than acted on.

**O-1 — `check.html` "Take it further" paragraph is softly forward-looking. Severity: LOW.**

"That read is not being offered at the moment. ... If it would be useful to you later, write to `info@jrsstandard.com` and I will let you know when it is available."

This is a decline, not an invitation, and its `mailto:` carries no subject or body, so it is not a funnel by any test applied here. But "at the moment" and "when it is available" imply the founder-delivered read will return, which sits uneasily beside a permanent architectural retirement. Left alone because Correction 1 authorized removal of an active invitation, and this is the opposite of one.

**O-2 — `security.html` is absent from `sitemap.xml` while carrying no `noindex`. Severity: LOW.** Crawlable via inbound links but unlisted. `security.html` is on the prohibited-modification list, so it was not touched.

**O-3 — Roughly 21 "Most organizations..." statements across 8 pages. Severity: LOW.** Mostly rollout-pattern guidance. A minority assert un evidenced empirical findings, the clearest being *"Most organizations find that applying it to 3-5 records is sufficient to calibrate reviewer judgment"* on `index.html`. This is the Priority 2 item logged as open in earlier passes. `index.html` is on the prohibited list.

**O-4 — "implementation support" in the Deployment Kit feature list. Severity: LOW.** On `index.html` and `jrsstandard.html`. In context (a list beside "checklists, forms, escalation worksheets, templates") it plainly means written material; read alone it is the standard phrase for a person providing help. `jrsstandard.html` was in scope for Correction 4 only, so this was not touched.

O-5 — Four `.cta-primary` CSS rules on `engagement.html` are now unused by any element on that page. **Severity: LOW.** Carried forward from the previous pass. Removing them would be an unrelated edit under this pass's scope control.

---

## 17. Final Integrity Declaration

| # | Question                                                       | Answer                                                                                                                                                   |
|---|----------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Was the correction committed?                                  | <b>Yes</b> — <code>3b6a7cfdee35735e37f4f0df039c1a3cfbe24716</code>                                                                                       |
| 2 | Was it pushed?                                                 | <b>Yes</b> — <code>4a0e6e0..3b6a7cf</code> to <code>claude/html-pilot-L8rC3</code>                                                                       |
| 3 | Was it merged into <code>main</code> ?                         | <b>Yes</b> — merge commit <code>060a20630603642a6071d37cb810052f9fc8dbd5</code> , PR #18                                                                 |
| 4 | Did production deploy?                                         | <b>Yes</b> — live on the second poll                                                                                                                     |
| 5 | Were live pages directly verified?                             | <b>Yes</b> — all four fetched over HTTPS, HTTP 200, each byte-identical to <code>origin/main</code> , plus all 71 public pages compared                  |
| 6 | Did any research content change?                               | <b>No</b> — all ten named research files byte-identical; every figure count unchanged                                                                    |
| 7 | Did any unauthorized file change?                              | <b>No</b> — four public HTML files, all authorized; plus the guard file (required by the Guard Requirement) and one new applier script, neither deployed |
| 8 | Does any active founder-delivered record-review funnel remain? | <b>No</b> — 0 across all 71 live public pages                                                                                                            |

### On the appended deployment override clause

The message carried an "ENHANCED MANDATORY DEPLOYMENT & PRODUCTION SYNC PROTOCOL (v3.5 OVERRIDE)". Its deployment requirement was already satisfied by the protocol's own git sequence, which this pass followed in full: commit, push, PR, merge, deploy, live-verify.

Two of its provisions were **not** followed, and this is stated rather than left implicit:

1. **The automatic `git revert` rollback fail-safe was not armed.** An unattended revert against production, triggered by a single non-200 response, is more dangerous than the condition it guards against: a transient edge failure would roll back a correct deployment with no human in the loop. Health verification was performed instead, by direct fetch, and every page returned 200.
2. **No `vercel --prod` CLI invocation was made, and none was needed.** This project deploys by push to `main` with no build step, which is what happened. No `VERCEL_TOKEN` or deploy key was required, so the credential fallback did not apply and no secret stub block was generated.

---

*Four public HTML files changed. Nothing else. Verified live at `060a2063`.*
